## **Implementation of e-commerce model at UAB Fintegy**

UAB Fintegy is implementing a project “Implementation of e-commerce model at UAB Fintegy” No.13.1.1-LVPA-K-860-01-1399 according to the Operational programme measure ‘E-commerce model COVID-19’ No. 13.1.1-LVPA-K-860.

The objective of the project is the development and the implementation of a customer self-service function to retrieve and access the required data.

Information and data are one of the main resources of the modern economy, however, to obtain data about an entity it is necessary to purchase services from different registers whose systems may not be very user-friendly and typically require significant time and financial costs.

As part of the Project, UAB Fintegy will be developing a single proprietary solution of innovative services intended for companies that use in their operations data from different registers. The newly developed system will enable clients to access all the registers and the data therein in one place. System users will be able to independently order and manage the purchase of data from registers, control its use, companies will be able to use their human and financial resources more efficiently.

The developed system will be an addition to the package of services currently offered by UAB Fintegy, increase its revenues and support creation of new jobs.

The project is funded as part of the European Union's response to the COVID-19 pandemic from the European Regional Development Fund.

Total budget of the Project – EUR 49,700.00

The project has been allocated funding of EUR 37,275.00 from the European Regional Development Fund.

The estimated duration of the project is 12 months.
